

安徽大学2017-2018学年第二学期
《高等数学B(二)》期中考试参考答案与评分标准

一、填空题(每小题3分, 共15分)

1. $\int_0^\pi dx \int_\pi^{x+\pi} f(x, y) dy.$

2. $\frac{1}{3}.$

3. $\frac{\sqrt{2\pi}}{2}.$

4. $\frac{1}{2}.$

5. ~~$1 \leq p \leq 2$~~ $0 < p \leq 1$

二、选择题(每小题3分, 共15分)

6. B. 7. A. 8. D. 9. C. 10. D.

三、计算题(每小题8分, 共32分)

11. 解. $I = \int_0^1 dy \int_{-y}^y e^{-y^2} dx \dots\dots\dots (4分)$

$= 2 \int_0^1 y e^{-y^2} dy = (-e^{-y^2})|_0^1 = 1 - \frac{1}{e} \dots\dots\dots (8分)$

12. 解. 作极坐标变换, $x = r \cos \theta, y = r \sin \theta$, 则 D 对应为 $1 \leq r \leq 2, 0 \leq \theta \leq \frac{\pi}{2}$.

$I = \int_0^{\frac{\pi}{2}} d\theta \int_1^2 \frac{(r \cos \theta) \sin(\pi r)}{r} r dr = \int_0^{\frac{\pi}{2}} \cos \theta d\theta \int_1^2 r \sin(\pi r) dr \dots\dots\dots (4分)$

$= -\frac{1}{\pi} \int_1^2 r d(\cos \pi r) = -\frac{1}{\pi} \left(r \cos(\pi r) \Big|_{r=1}^{r=2} - \int_1^2 \cos(\pi r) dr \right) = -\frac{3}{\pi} \dots\dots\dots (8分)$

13. 解. 令 $u = x + y, v = x - y$, 则 $x = \frac{u+v}{2}, y = \frac{u-v}{2},$

且 D 对应于 $D_1: 0 \leq u \leq \pi, 0 \leq v \leq \pi.$

$\left| \frac{\partial(x, y)}{\partial(u, v)} \right| = \frac{1}{2} \dots\dots\dots (4分)$

于是, $I = \int_0^\pi dv \int_0^\pi \frac{1}{2} u \sin v du = \frac{1}{2} \pi^2 \dots\dots\dots (8分)$

14. 解. 设 $D_1 = \{(x, y) \mid x^2 \leq y \leq 1, -1 \leq x \leq 1\}$,

$D_2 = \{(x, y) \mid 0 \leq y \leq x^2, -1 \leq x \leq 1\}$. 则

$$I = \iint_{D_1} (y - x^2) dx dy + \iint_{D_2} (x^2 - y) dx dy \dots\dots\dots (2\text{分})$$

$$I_1 = \iint_{D_1} (y - x^2) dx dy = 2 \int_0^1 dx \int_{x^2}^1 (y - x^2) dy = 2 \int_0^1 \left(\frac{1}{2} y^2 - x^2 y \right) \Big|_{y=x^2}^{y=1} dx$$

$$= 2 \int_0^1 \left(\frac{1}{2} - x^2 + \frac{1}{2} x^4 \right) dx = 2 \left(\frac{1}{2} x - \frac{1}{3} x^3 + \frac{1}{10} x^5 \right) \Big|_{x=0}^{x=1} = \frac{8}{15};$$

$$I_2 = \iint_{D_2} (x^2 - y) dx dy = 2 \int_0^1 dx \int_0^{x^2} (x^2 - y) dy = 2 \int_0^1 \frac{1}{2} x^4 dx = \frac{1}{5}.$$

综上所述, $I = I_1 + I_2 = \frac{11}{15}$. $\dots\dots\dots (8\text{分})$

四、判别题 (每小题8分, 共32分)

15. 解. 设 $a_n = \frac{2^n n!}{n^n}$, 则

$$\lim_{n \rightarrow \infty} \frac{a_{n+1}}{a_n} = 2 \lim_{n \rightarrow \infty} \frac{n^n}{(n+1)^n} = \frac{2}{e} < 1. \dots\dots\dots (4\text{分})$$

由比值判别法可知, 原级数收敛. $\dots\dots\dots (8\text{分})$

16. 解: 设 $u_n = \left(\frac{a+1}{a_n} \right)^n$, 则

$$\lim_{n \rightarrow \infty} \sqrt[n]{u_n} = \lim_{n \rightarrow \infty} \frac{a+1}{a_n} = \frac{a+1}{a} > 1. \dots\dots\dots (4\text{分})$$

由根式判别法可知, 原级数发散. $\dots\dots\dots (8\text{分})$

17. 解. 考虑反常积分 $\int_2^{+\infty} \frac{1}{x(\ln x)^\alpha} dx$. $\dots\dots\dots (3\text{分})$

若 $\alpha > 1$, 则该反常积分收敛, 由Cauchy积分判别法可知, 原级数收敛.

若 $0 < \alpha \leq 1$, 则该反常积分发散, 由Cauchy积分判别法可知, 原级数发散. (8分)

18. 解. 设 $a_n = \ln(1 + \frac{1}{n})$. 则

a_n 为单调递减数列, 且 $\lim_{n \rightarrow \infty} a_n = 0$. 故由Leibniz定理可知, 原级数收敛. $\dots\dots (4\text{分})$

另一方面, $\lim_{n \rightarrow \infty} n a_n = 1$, 故 $\sum_{n=1}^{+\infty} a_n$ 发散.

综上所述, 原级数条件收敛. $\dots\dots\dots (8\text{分})$

五、证明题 (共6分)

19. 证明:

$$\begin{aligned}\iint_{D_t} f'(x+y) dx dy &= \int_0^t dx \int_0^{t-x} f'(x+y) dy \\&= \int_0^t f(x+y) \Big|_{y=0}^{y=t-x} dx = \int_0^t (f(t) - f(x)) dx = tf(t) - \int_0^t f(x) dx. \dots\dots\dots (3分) \\ \iint_{D_t} f(t) dx dy &= f(t) \iint_{D_t} dx dy = \frac{1}{2} t^2 f(t).\end{aligned}$$

于是, 我们有: $tf(t) - \int_0^t f(x) dx = \frac{1}{2} t^2 f(t)$.

两边同时对 t 求导可得, $tf'(t) = tf(t) + \frac{1}{2} t^2 f'(t)$.

故当 $t \neq 0$ 时, $\frac{f'(t)}{f(t)} = \frac{2}{2-t}$. \dots\dots\dots (6分)
